# MDT Solution Proposal

## Setpoint shift via Glass Push Button II Smart

### Possible applications:

The setpoint adjustment with the Glass Push Button II Smart with temperature sensor can be used to adjust the setpoint of the heating per room. This allows the user to adjust the setpoint per room individually. In addition, the Glass Push Button II Smart offers the possibility of clearly visualising operating modes, current temperature value and setpoint temperature.

#### Info:

The setpoint adjustment can also be realised with the Push Button Smart 86 with temperature sensor. Both devices use the same database. Only the Glass Push Button II Smart is mentioned in the following example.

### Used devices:

#### MDT Glass Push Button II Smart with temperature sensor

BE-GT2TW.01/ BE-GT2TS.01

#### MDT Heating Actuator

AKH-0400.02/ AKH-0600.02/ AKH-0800.02

|---|---|
| Solution example 1: Setpoint shift via 1 bit .....                    | 2 |
| Solution example 2: Setpoint shift via 1Byte or 2Byte .....           | 5 |
| Solution example 3: 2Byte shift of basis comfort setpoint value ..... | 8 |

## Solution example 1: Setpoint shift via 1 bit

### Settings on Glass Push Button II Smart with temperature sensor:

- Buttons grouped together (two- function)
- Two-button function: temperature shift
- Temperature shift -> 1Bit temperature shift
- Use internal temperature value -> active

The settings for the grouped buttons are shown in the following figure:

|  |   |  |
|--|---|--|
| Hardware select<br>— Operation / Display<br>General settings<br>Display setting<br>Information screen<br>Push button functions<br><b>PB1/2: Temperature shift</b><br>+ State LED<br>+ Logic<br>+ Temperature measurement | Description of objects<br>Two-button function<br>Temperature shift<br>Use internal temperature<br>With left push button move down and with right push button move up<br>Repeated sending at pressed key | Temperature shift<br><b>temperature shift</b><br><b>1Bit temperature shift</b><br><input type="radio"/> not active <input checked="" type="radio"/> active<br>over text input<br>Text<br>Color of symbol<br><br>red<br>Ist<br>Soll<br>not active <input type="radio"/> active |
|--|---|--|

### - Settings of the temperature value:

- Recommended setting:  
"Send measured value cyclically - 10 min" and "Send measured value at change of 0.2 °C"

**Settings on Heating actuator:**

Channel:

- Mode "integrated controller"

|                     |                        |  |
|---------------------|------------------------|--|
| Setup general       | Objects description    |  |
| A: Channel A        | Mode                   | integrated controller  |
| Controller settings | Heating / Cooling mode | Heating and Cooling  |
| B: Channel B        | Valve type             | <input checked="" type="radio"/> not energized closed <input type="radio"/> not energized opened |
| Controller settings | PWM cycle time         | 10 min   |
|                     | Block object           | <input type="radio"/> inactive <input checked="" type="radio"/> active                           |

"Controller settings":

- Send setpoint changes -> YES
- Setpoint adjustment via -> 1 bit

|                     |   |   |
|---------------------|---|---|
| Setup general       | Priority                                      | <input checked="" type="radio"/> Frost/Comfort/Night/Standby<br><input type="radio"/> Frost/Night/Comfort/Standby |
| A: Channel A        | Heating system                                | Underfloor heating (6K / 150 min)   |
| Controller settings | Basic comfort setpoint                        | 21,0 °C   |
| B: Channel B        | Standby reduction                             | 2,0 K   |
| Controller settings | Night reduction                               | 3,0 K   |
| C: Channel C        | Send cyclic setpoint comfort                  | 5 min   |
| D: Channel D        | Send setpoint change                          | <input type="radio"/> No <input checked="" type="radio"/> Yes   |
| Controller settings | Send cyclic current setpoint                  | not active  |
| E: Channel E        | Max setpoint offset                           | 3,0 K   |
| Controller settings | Setpoint value offset over 1Byte/2Byte object | not active  |
|                     | Setpoint value offset over 1Bit object        | <input type="radio"/> inactive <input checked="" type="radio"/> active  |
| Step width          |   | 0,5 K   |

The step width can be selected according to your own wishes. It specifies the setpoint shift per keystroke.

## Solution example 2: Setpoint shift via 1Byte or 2Byte

### Settings on Glass Push Button II Smart with temperature sensor:

- Buttons grouped
- Two-button function: temperature shift
- Temperature shift -> 1Bit temperature shift
- Use internal temperature value -> active

The settings for the grouped buttons are shown in the following figure (here: 2 Byte):

|  |                        |  |
|--|------------------------|--|
| Hardware select  | Description of objects |  |
| – Operation / Display<br>General settings<br>Display setting<br>Information screen<br>Push button functions<br><b>PB1/2: Temperature shift</b>   |                        |  |
| Two-button function<br>Temperature shift<br>Use internal temperature<br><small>With left push button move down and with right push button move up</small>  |                        |  |
| Step width<br>Lower limit<br>Upper limit<br><small>Repeated sending at pressed key</small><br>Switchover considers status object   |                        |  |
| Function name<br>Text<br>Color of symbol   |                        |  |
| <br>Label for actual value of temperature<br>Label for setpoint temperature<br><small>Blocking Object</small> |                        |  |

- Settings of the temperature value:

- Recommended setting:

"Send measured value cyclically - 10 min" and "Send measured value at change of 0.2 °C"

|   |                         |  |
|---|-------------------------|--|

### Solution example 3: 2Byte shift of basis comfort setpoint value

This is a special case because this is not a classic setpoint shift but the basic comfort setpoint is changed as an absolute value. As a result, the setpoints for the other operating modes also change, as these refer to the basic comfort value. With the classic setpoint shift, the parameterised base value - and thus the reference value for the other operating modes - remains the same and is only shifted as the difference in K (Kelvin). This special case is usually required when visualisations are also in the project. These can usually no setpoint shift but only the change of the absolute value. Both methods should not be mixed because problems can often occur here!

#### Settings on Glass Push Button II Smart with temperature sensor:

- Buttons grouped
- Two-button function: temperature shift
- Temperature shift -> 2Byte shift of basis comfort setpoint value
- Use internal temperature value -> active

The settings for the grouped buttons are shown in the following figure:

|   |  |                        |                   |                     |                   |                   |   |                          |  |  |  |            |     |             |    |             |    |                                 |  |                                    |   |               |         |                 |     |  |  |                                       |     |                                |      |                 |  |
